SUMMARY

Senior Frontend Engineer with 9+ years designing and building scalable React, Next.js, TypeScript, and React Native applications for distributed, remote-first teams. Led frontend architecture for an AI-powered analytics platform, delivering interactive dashboards and data visualizations using D3.js, ECharts, and amCharts that the sales team used directly to drive new user and publisher acquisition. Experienced in performance optimization, responsive UI development, REST API integration, mentoring engineers, and collaborating across product, design, backend, and QA teams. I'm looking for a team building something complicated enough that "just use a component library" stopped being the answer a while ago.

WORK EXPERIENCE

Head of Frontend Development

Kunato · Hybrid — Onsite (1.5 yrs) & Remote, USA · Apr 2020 – Present

- Owned the AI-output-to-interface pipeline end to end — from frontend architecture and performance optimization through daily debugging and client escalations — for the product's entire admin and visualization suite.
- Built dashboards that the sales team used directly to drive new user and publisher acquisition — turning AI engine output into a tool sales could act on, not just engineering could read.
- Set the technical bar for a 3-person team I mentored, establishing the code review process, Git workflow, and coding standards the team still runs on today.
- Operated inside a 12-member agile team, working directly with QA and REST APIs to close the design-to-code gap and keep defect counts down.
- Partnered with UX/UI design to turn complex, data-heavy designs into pixel-perfect, responsive interfaces across web and mobile.
- Presented technical findings and product updates directly to decision-makers, keeping engineering and leadership aligned.

Frontend Developer — Freelance / Contract

Remote · Feb 2016 – Mar 2020

Chose contract work deliberately to build range across industries before specializing — logistics, mobile, and enterprise platforms.

Hirewho — Indianapolis, USA

- Built the frontend and mobile app for Hirewho, collaborating directly with their distributed team.

Bigfyre

- Built the Bigfyre mobile app end-to-end, from concept through delivery, as sole frontend owner.

Independent Client — Australia

- Built a real-time fleet-tracking web application for an Australia-based trucking company, enabling live vehicle monitoring.

SKILLS

Core (9 yrs, daily use): React.js, Next.js, TypeScript, JavaScript (ES6+)

Data Visualization: D3.js, ECharts, amCharts — production dashboards for an AI/analytics platform

Mobile: React Native — shipped the Bigfyre app end-to-end

Styling & Animation: Tailwind CSS, SASS/SCSS, Framer Motion

Backend & Data: Node.js, Python, MongoDB — used across full-stack freelance delivery

Leadership: Team mentoring, code review standards, Agile/Scrum, cross-functional remote collaboration

Engineering: Frontend Architecture, Performance Optimization, Responsive Design, REST APIs, Git, Code Reviews

EDUCATION

Bachelor of Computer Applications

Karnataka State Open University · 2015 – 2017
